Periodically, CCS issues minor fixes to the CCS System in the form of a CCS Fix File. This is a text document that the CCS System uses to correct minor errors or include minor enhancements. The following steps detail installing a CCS Fix file onto your computer.

INSTALLING THE FIX FILE FROM WITHIN CCS

- Copy the fix file that you received onto a 3½" floppy diskette.
- Insert this floppy diskette into your disk drive.
- Load the CCS System.
- Press **CTRL + F5** on your keyboard.

CCS will display a dialog on the screen 'Default Search Path'.

- Hit the SoftKey **Copy Fix File**.

CCS will copy the fix file onto your computer. If the copy was a success then a message will be displayed informing you that you should restart CCS.

INSTALLING THE FIX FILE FROM WITHIN WINDOWS

This method is normally used when for some reason it is not possible to run CCS.

- Close CCS.
- Click on the **CCS Shortcut** with the Right Mouse button.
- Click on **Properties**.
- Click on the **Short Cut** tab.
- Click on **Find Target**.

At this point Windows will load Windows Explorer viewing the CCS System Files.

- Click on the **File** Menu.
- Click on **New**.
- Click on **Folder**.
- Type **FIX** as the folder name.
- Hit Enter on your keyboard.
- Double click on the folder **FIX**.
- Save the FIX file that you were sent from CCS into this folder.

TEST THE INSTALLED FIX FILE

The error that you were experiencing should now be resolved. Try to repeat the error to confirm this. If you still have a problem then you should contact CCS for further assistance.
