

## IMPORT AND EXPORT PROGRAM DATA

Title	Import and Export program data
Category	IMPORT EXPORT
Document Number	TN0030
Software version	1.06
Application	SITEPLAN
Create Date	17 July 2003
Revision Date	21 July 2003
Document Version	Final
Author	Louis Reynolds
Support	support@ccssa.com

### INTRODUCTION

This document is to help you choose what method of import or export should be used for different situations.

There is documentation on each – make sure that you have the most up to date documentation and that you are using the version specified by the documentation.

### EXPORT PROGRAM FROM SITEPLAN

#### SitePlan to P3 (excluding P3e)

Use P3 Batch file export.

#### SitePlan to SureTrak

Use MPX.

Note that some versions of SureTrak require a patch to prevent durations and lags being imported as hours. This can be found on the Primavera website.

#### SitePlan to MSProject (all versions)

Use MPX.

#### SitePlan to PS7

Use MPX

#### SitePlan to PowerProject

Use MPX.

### IMPORT PROGRAM INTO SITEPLAN

#### P3 to SitePlan (excluding P3e)

Use P3 Batch file import.

Otherwise use the P3 CSV import or MPX. Both these methods have problems with order of activities as no headers are exported.

---

## **SureTrak to SitePlan**

Use MPX.

If "outline level" has been used to organise the data then the order of the activities and headers will import perfectly. If a code structure has been used then NO headers will be exported by SureTrak. The best solution in this case will be to save the project as a P3 concentric file and use P3 to do the export (see above).

## **MSPProject (all versions >3 and <2000) to SitePlan**

Use MPX.

## **MSPProject 2000 to SitePlan**

Use CSV. MSPProject 2000 does not export MPX files.

There is, however, a free-ware tool that can convert MSPProject 2000 files to MPX. This is available at [www.download.com](http://www.download.com), look for Project 2000 Exchange Wizard. NOTE that this tool converts all durations to minutes and requires 1.06b8 to import correctly.

Another method is to save the program as an MSPProject 98 program – then use MSP98 to save the mpx file.

## **PS7 to SitePlan**

Use MPX. . Note that we have found that the MPX export from PS7 is not very good.

Another option is CSV. There is no documentation on this.

## **PowerProject to SitePlan**

Use MPX.

## **PROBLEMS**

Email the file that is being imported/exported to [siteplan@ccssa.com](mailto:siteplan@ccssa.com). Include your name, company, phone number (international format), version of CCS, version of the product that is attempting to open the file and any special information i.e. the file has been exported on a non-English machine.
